PROJECT

Raised roof & new attic room to detached house in Wallingford

DESIGN SUMMARY

The former station master's house was greatly extended to include new accommodation in the roof. The cut roof was only being used for storage and housing water tanks.

An additional large bedroom and ensuite was required that felt spacious. This was achieved through combining the existing roofs into a design that raised the ridge height of the building whilst maintaining the character of the original building.

The heating system was adapted so tanks and control equipment were located on the ground floor. Photovoltaic panels were added to benefit from the Feed In Tariff.

The double bedroom and ensuite offers great views of the surroundings and plenty of additional storage space in the eaves.
