

## PROJECT

Replacement dwelling

## DESIGN SUMMARY

The brief from our client was to create a brand new 4 bedroom house to replace an existing run down dwelling in Oxfordshire. The proposed style is simple, elegant and contemporary in form. It will undoubtedly make a positive contribution to the streetscape and character of the locality.

The dwelling is being constructed with SIP (Structural Insulated Panels). A fast method of construction that will enable the full shell to be erected within 4-5 weeks. The panels consist of an insulating layer of rigid polymer foam sandwiched between two layers of structural board. The panels are pre-fabricated and can be craned into position on site, hence the rapid build timeframe.
